Description

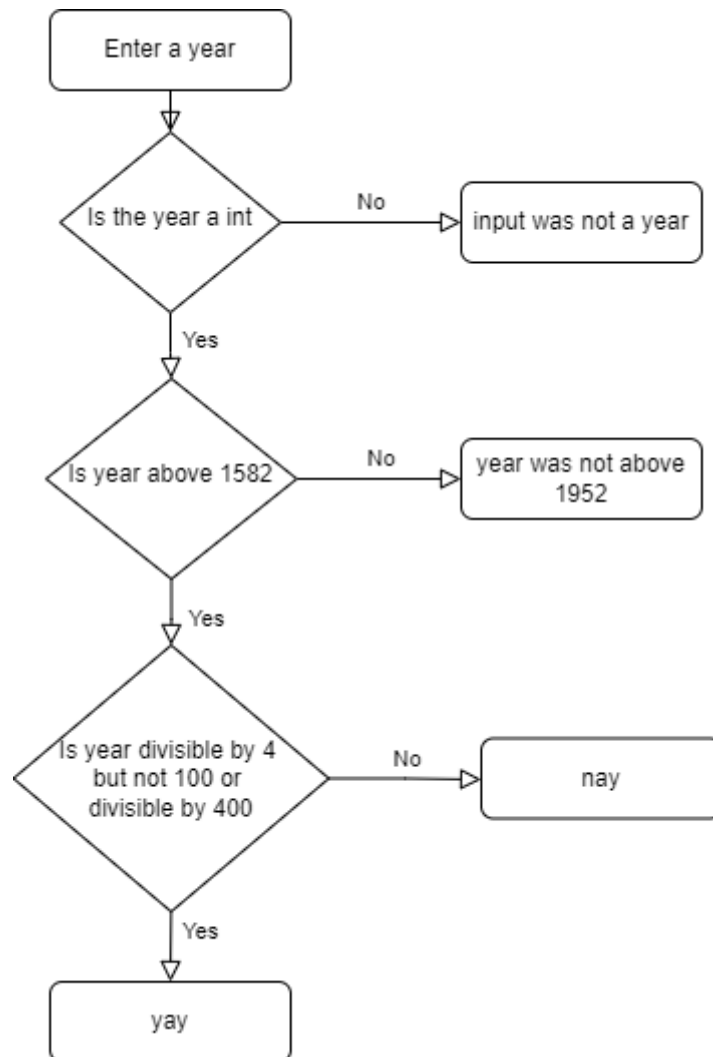

Figure 1: Flowchat of Algorithm

In Figure 1 a flowchat of the algortihm for IsLeapYear can be seen. IsLeapYear check if input was an integer, then it checks if the input was a numer above 1582. This is done to do some error handling and prevent the program from stopping. Then IsLeapYear does the final check to tell if the input is a leap year or not and then print "yay" or "nay".
